Chief Executive's review

Introduction

It's a joy to welcome you to the Group's first annual report following a better company in June 2009. In the following pages we'll give you an overview of our business and the challenges we've met. It's a pleasure to have you here and we hope you'll find it an interesting read. Our business has many challenges, but to overcome them we have a strong financial strategy for our shareholders.

Manufacturing is a dynamic, vibrant and exciting business, one which is a pleasure to be a part of. We have a strong commitment to our people, and we'll continue to invest in you, the core of our success. We'll continue to invest in the people of 2010. And this is our challenge: to continue to invest in you, the core of our success. We'll continue to invest in you, the core of our success. We'll continue to invest in you, the core of our success.

Richard Segal
 Chief Executive Officer

Our players enjoy a flutter. Some trust to luck, others employ their well-honed skills. Either way, they play for entertainment.

Over the next few pages we have sought to communicate the sheer scale of our business, but at the same time have some fun. We hope you enjoy it.

Game on!

Halma plc 2008

This is saving El Paso 6 million gallons of water per day.

City-wide electronic surveillance cuts water wastage
 The 700,000 residents of the city of El Paso, Texas, are benefiting from our water pipework leak location technology which is credited with saving the city about 6 million gallons of water a day.

El Paso has invested in the world's largest permanently installed network of underground water pipework leak detectors. About 11,000 of our PermaFlow sensors monitor the city's water distribution network. On top of the environmental benefit of conserving water resources, the city has made financial savings in reduced water treatment costs, and also energy and cost savings from reduced pumping.
